

MTB350-C245T-HQ-HS-3K-42%RW-1250

Resin System

MTB350

30% bio based long outlife component system

Reinforcement

245gsm High quality visual 2x2 twill carbon fabric

Technical info

CPT = 0.28mm

Density = 1.49 g/cc

Reduced Impact

14% Laminate Bio content

No frozen storage

Sustainability focus

MTB350 is a bio-epoxy system that is 30% derived from bio-based sources, enabling an incremental step towards a more sustainable composite solution whilst still providing the performance of conventional systems. When combined with High Quality visual fabrics, excellent clarity and good UV stability can be realised after lacquering with a suitable system. MTB350 also has the highly novel benefit of at least 6 months outlife at room temperature, further removing the cost and energy (CO₂) associated with frozen storage.
